Date of Birth	1976-09-06
Salary (in USD)	5400/Per Month
Industry	Drilling / Rig
Sub Industry	WellSite Supervisor
Nationality	Kazakhstan
Primary Language	English,
Secondary Language	Arabic,
Total Years of Experience	27

## Additional Information

Roles and Responsibilities	Additional Skills/Certification
----------------------------	---------------------------------

I was recruited to the Berkut Platform operating in the Okhost Sea. This Production Platform is one of the five largest units drilling in the Arkutum-Dagi field 50 kilometers off the coast of Sakhalin. This Drilling Package featured Generation Six equipment including: NOV TDX- 1250 Top Drive – Two NOV 250 Ton Hydraulic Deck Cranes – NOV Hydro-Racker Pipe Handling System - NOV NXT Three Stage BOP – NOV BOP HPU - Wirth GH 2500 Drawworks – Wirth Tri-Plex Mud Pumps – Wirth RST-5-491/2 – NOV – PipeCat Loading System. I was responsible for directing the second shift mechanics in maintaining the rig operating equipment. I directed second shift mechanics by utilization of the Oracle Planned Maintenance System. I determined rig equipment maintenance priorities and assigned second shift in accordance to prevent unscheduled NPT. I successfully executed this position with limited NPT until late Feb when ENL shutdown due to the war in Ukraine. Main reason of dismissal by own will, was low working conditions at this workplace. In 2023, cases of detention by the migration police have become more frequent, where workers are checked at the border for at least 5-6 hours. The reason for this was the departure of foreign companies from Russian territory. When entering and leaving Russia, they are delayed at the border for longer if you arrived on a work visit rather than a tourist one, which led to my leaving the company of my own free will. · Maintenance of all 6th Generation drilling equipment and all hydraulic systems · Conduct planned preventative maintenance so as to minimize the risk of delay through equipment breakdown · Check and maintained all rig drilling systems, and analyzed data collection and maintained logs · Ensure that all reporting procedures and routines are adhered to · Raise Material Requisitions for consumables and spares for the rig and maintain adequate stock. · Maintained & Organized the Mechanic's Shop to be free of free from safety hazards · Participate in safety meetings and safety drills · Ensure that all work is carried out to the requirements of the Permit-to-work system and in compliance with Safety Procedures in force, initiates PTW as necessary within their discipline and ensures all safety precautions are carried out

Bosit Rig pass  
Working at height.  
Confined space  
work

## Education Summary

Course	University	Passing Year	Country
Engineer Electrcal	High school 1	1994	Kazakhstan
