A Roughneck is an essential crew member on an oil drilling rig, responsible for physically demanding and safety-critical tasks that ensure smooth drilling operations. Roughnecks work under the direction of the Driller and are usually part of the drilling crew, which includes the Derrickman and Floorhands. The primary responsibilities of a Roughneck include handling drill pipes, connecting and disconnecting sections of pipe, and maintaining drilling equipment. They assist in the setup and breakdown of the drilling rig and help guide pipe into and out of the borehole during tripping operations. This role demands strong teamwork, as Roughnecks must coordinate closely with other crew members during fast-paced operations. Roughnecks also perform rig maintenance, such as cleaning the rig floor, greasing moving parts, tightening bolts, and replacing worn tools. They ensure that tools and materials are in place and ready for use. Maintaining a clean and organized work area is vital for safety and efficiency. Safety is a top priority; Roughnecks must follow strict safety protocols and wear personal protective equipment (PPE) such as helmets, coveralls, safety boots, and glasses. They must be alert and responsive in case of emergency situations like blowouts or equipment failure. Overall, the Roughneck plays a critical role in oil drilling operations through physical labor, equipment handling, and ensuring operational safety.

I have safety's certificates of H2S and basic first aid and Fire fighting certificate
