As an experienced Electrical Technician with strong exposure to both onshore and offshore operations, I am responsible for the installation, operation, maintenance, and troubleshooting of generators, light towers, distribution boards, control panels, and temporary power systems. My duties include carrying out routine inspections, preventive maintenance schedules, and corrective repairs to ensure uninterrupted power supply for drilling, production, and project sites. I perform cable termination, earthing, panel wiring, and testing of electrical circuits using appropriate tools and procedures. I diagnose equipment faults, replace defective components, and restore systems quickly to reduce downtime. I support clients such as Baker Hughes, SLB and Halliburton by preparing temporary power setups, monitoring load distribution, and ensuring all equipment operates within safety limits. I strictly follow company HSE policies, lock-out/tag-out procedures, and permit-to-work requirements. I document all maintenance activities, update log sheets, and report equipment conditions to supervisors. Additionally, I assist in commissioning activities, equipment relocation, and shutdown operations. I am capable of working independently in remote offshore conditions, responding to emergency breakdowns, and coordinating with multi-disciplinary teams. My role also includes ensuring that all electrical systems are maintained safely, efficiently, and in compliance with client and international standards.

10+ years Oil & Gas electrical experience. Skilled in generator maintenance, troubleshooting and load testing. Certified in BOSIET/FOET, H2S and Offshore Medical. Strong safety and technical skills.
