----------------------------	---------------------------------

Coordinate Fabrication activities to meet clients specification in terms of quality and Safety. Coordinate with QAQC to meet quality productivity in line with international code and standards. Ensure timely qualification of welders and fitters and Raise RFQ for subcontractors/vendors and ensure that they meet quality specifications of the clients. Steer meetings with the clients and provide updates on schedules and critical paths and manage the SMDR and documentation process to ensure that it is in alignment with the milestones. Provide notices of meetings to key stakeholders. Facilitate the process of document review processes and TQ/NCR and get latest drawings approvals and readiness alongside other qualification processes to meet milestones

Dear Hiring Manager, Further to your recent advertisement for openings on an Engineering, Procurement & Construction (EPC) project, I am writing to formally express my strong interest in the position of a Deputy Project Engineer in your organization. With a strong background in structural and piping engineering within EPC projects from FEED to Commissioning, I am confident that my technical expertise, project management capabilities, and construction experience align perfectly with your requirements. Over the years, I have developed extensive proficiency in fabrication and construction field engineering, supported by a blend of multidisciplinary experience in project engineering (PMP Certified), planning and interface management, project controls, QA/QC, and cost estimation. I also possess hands-on experience in welding inspection (CSWIP 3.1) and NDT methods (BINDT-PCN MT/PT/PWHT), coupled with a solid grasp of ASME B31.3 process piping standards and documentation control systems. In addition to my engineering competencies, my academic background includes a B.Sc. in Environmental Protection and Resources Management and an M.Sc. in Disaster Risk Management. This dual foundation has strengthened my understanding of Health, Safety, and Environmental (HSE) management systems, enabling me to identify and mitigate operational risks in complex oil and gas environments. My HSE expertise spans risk assessment and management, incident investigation, HSE audits, hazard identification (HAZID), HAZOP studies, and environmental impact assessments (EIA). Through my professional journey, I have consistently demonstrated a strong work ethic, attention to detail, and commitment to engineering excellence — qualities that resonate with your company's reputation for delivering safe, high-quality, and efficient engineering solutions. I would be delighted to contribute my skills and dedication to your engineering team and support the company's mission to advance oil and gas infrastructure in Nigeria. Kindly find attached my CV for your review and consideration. Thank you for your time and attention. I look forward to the opportunity to discuss how my experience and qualifications can add value to your team.

Manage construction Engineering progress
